# Firebase Login con Android

Java Day Guatemala 2017 Kevin Villatoro

Contacto: josue.kevin4@gmail.com

# Características

Compila apps rápido, sin administrar la infraestructura.

Con el respaldo de Google y la confianza de apps reconocidas.

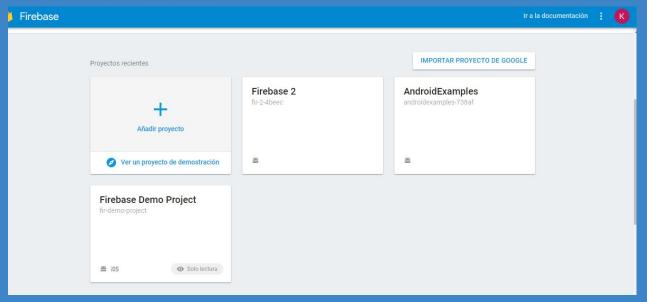

Una consola con productos que funcionan en conjunto.

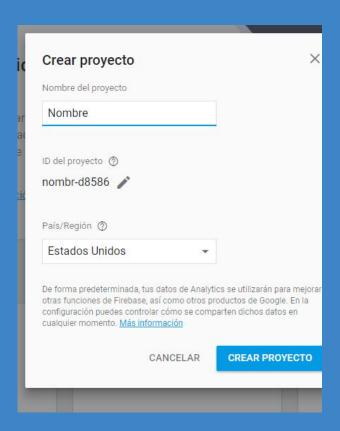

# Primeros pasos:

1) Entrar a la consola de Firebase

https://console.firebase.google.com

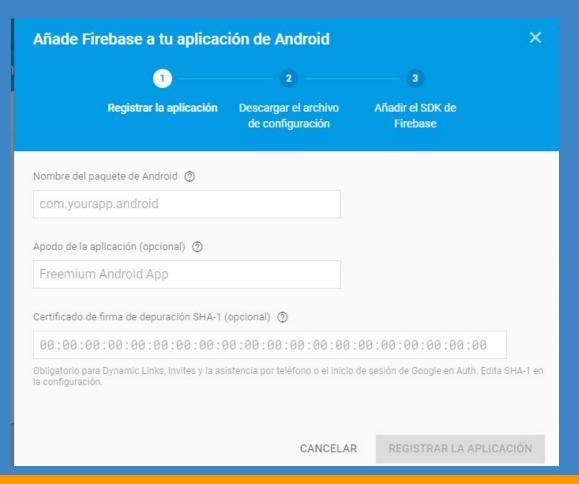

2) Crear un nuevo proyecto

goo.gl/fih4WT

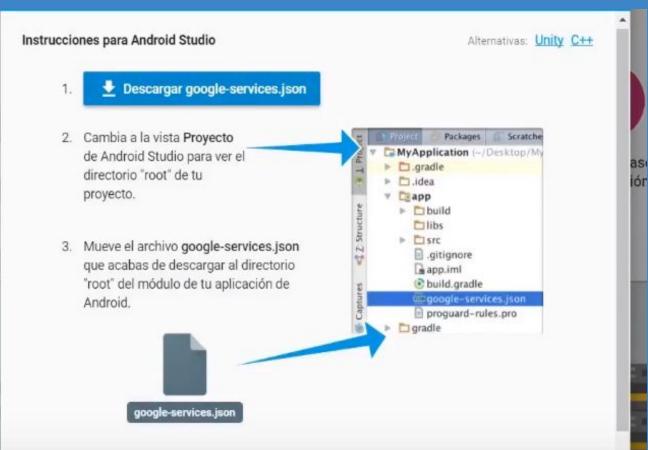

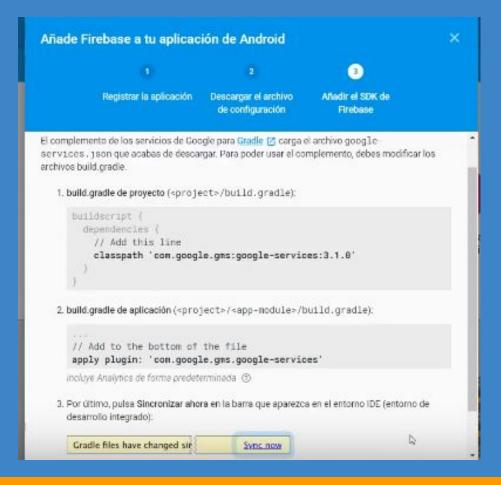

#### **WINDOWS**

keytool -list -v -keystore
"C:\user\_name\.android\debug.keystor
e" -alias androiddebugkey -storepass
android -keypass android

#### **En OSX y Linux**

keytool -list -v -keystore .android/debug.keystore -alias androiddebugkey -storepass android -keypass android

#### Configuración Finalizada

## Clases a usar:

**FirebaseAuth** 

FirebaseAuth.AuthStateListener

```
private void inicializar() {
    firebaseAuth = FirebaseAuth.getInstance();
    authStateListener = (AuthStateListener) (firebaseAuth) → (
            FirebaseUser firebaseUser = firebaseAuth.getCurrentUser();
            if(firebaseUser !=null){
                Log.v(TAG, "onAuthStateChanged-signed-in" + firebaseUser.getUid());
                Log.v(TAG, "onAuthStateChanged-signed-in" + firebaseUser.getEmail());
            |else{
                Log.v(TAG, "onAuthStateChanged-log-out");
```

```
private void crearCuenta(final String correo, String pass) {

firebaseAuth.createUserWithEmailAndPassword(correo,pass).addOnCompleteListener((task) → {

    if(task.isSuccessful()) {

        Toast.makeText(MainActivity.this, "Creado exitosamente, puede iniciar sesion", Toast.LENGTH_SHORT).show();

    }else if(firebaseAuth.getCurrentUser().getEmail().equals(correo)) {

        Toast.makeText(MainActivity.this, "Ya existe este correo registrado", Toast.LENGTH_SHORT).show();

    }else {

        Toast.makeText(MainActivity.this, "No se pudo crear la cuenta", Toast.LENGTH_SHORT).show();

    }
});
```

```
private void iniciarSesion(String correo,String pass) {
    firebaseAuth.signInWithEmailAndPassword(correo,pass).addOnCompleteListener((task) → {
        if(task.isSuccessful()) {
            Toast.makeText(MainActivity.this,"Inicio correcto",Toast.LENGTH_SHORT).show();
        }else{
            Toast.makeText(MainActivity.this,"Verifique sus datos",Toast.LENGTH_SHORT).show();
        }
    }
});
```

```
@Override
protected void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.activity main);
    inicializar():
    btnCrearCuenta = (Button)findViewById(R.id.btn Create);
    btnInicar = (Button)findViewById(R.id.btn SigIn);
    txtCorreo = (EditText)findViewById(R.id.txt user);
    txtPassword = (EditText)findViewById(R.id.txt pass);
    btnCrearCuenta.setOnClickListener((view) -> 1
            if(txtCorreo.getText().toString().isEmpty() || txtPassword.getText().toString().isEmpty()){
                Toast.makeText(MainActivity.this, "Debe llenar los campos", Toast.LENGTH SHORT).show();
            }else if(txtPassword.getText().length() <= 6){</pre>
                crearCuenta(txtCorreo.getText().toString(),txtPassword.getText().toString());
    btnInicar.setOnClickListener((view) -> (
            if(txtCorreo.getText().toString().isEmpty() || txtPassword.getText().toString().isEmpty()){
                Toast.makeText(MainActivity.this, "Debe llenar los campos", Toast.LENGTH SHORT).show();
                iniciarSesion(txtCorreo.getText().toString(),txtPassword.getText().toString());
```
